To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

Platinum compounds are generally highly toxic, even though the rate of absorption via the gastrointestinal tract is relatively poor. Symptoms of platinum intoxication are hepatic and renal damage, impaired hearing, and severe sensitization with allergic manifestations in predisposed persons (rhinitis, asthmatic attacks, urticaria). Platinum is not known to play a physiological role.

Other dangerous properties can not be excluded.

This substance should be handled with particular care.
