

Specification – Certified Reference Material

Certipur® GF AAS Multi element standard solution XVIII

Accreditation:

Deutsche
Akkreditierungsstelle
D-RM-15185-01-00

Merck KGaA, Darmstadt, Germany is accredited by the German accreditation authority as registered reference material producer (D-RM-15185-01-00) in accordance with **ISO 17034**.

Producer:	Merck KGaA, Frankfurter Str. 250, 64293 Darmstadt, Germany
Description of CRM:	GF AAS Multi element standard solution XVIII
Ord. No.:	1.04487.0100
Expiry date:	3 years
Storage:	+15°C to +25°C tightly closed in the original container
Matrix:	HNO ₃ 5%

Element	Specification	Associated uncertainty, $U=k \cdot u$ ($k=2$) as mass concentration	Traceable to NIST SRM®
Ag	9 - 11 mg/l	±0.5 mg/l	SRM 3151
Al	90 - 110 mg/l	±2 mg/l	SRM 3101a

Metrological traceability:

This certified reference material has been measured applying high precision ICP-OES and is directly traceable to the corresponding **NIST SRM®** as mentioned on page 1.

NIST: National Institute of Standards and Technology, Gaithersburg, USA.

Measurement method:

Inductively coupled plasma optical emission spectrometry ICP-OES.

Application and correct use:

This certified reference material is intended for use as **graphite furnace AAS calibration standard** for atomic absorption spectrometry, spectro-photometry and other analytical techniques. Shake well before use and never pipet directly from the original container.

Associated uncertainty:

The associated uncertainty U_{CRM} reported with the certified values is calculated as combined expanded uncertainty $U_{CRM}=k \cdot u_{CRM}$ in accordance with GUM and EA-4/02, with $k=2$ as the coverage factor for a 95% coverage probability.

The combined uncertainty u_{CRM} is derived from combination of the squared uncertainty contributions:

$$u_{CRM} = \sqrt{u_{Characterisation}^2 + u_{Homogeneity}^2 + u_{Stability}^2}$$

u_{Characterisation}:

is the uncertainty in accordance with DIN EN ISO/IEC 17025 which includes the contributions of the primary reference material and the measuring system. The characterisation measurements have been conducted by our DAkkS accredited calibration laboratory.

u_{Homogeneity}:

is the between-bottle variation in accordance with ISO 17034. The assessment of homogeneity is performed by analysis of a representative number of systematically chosen sample units.

u_{Stability}:

is the uncertainty obtained from short-term and long-term stability in accordance with ISO 17034. The stability studies are the basis for the quantification of the expiry date of this elemental standard for the unopened bottle.
