## Product Information

precipitation assay.

### Anti-Rabbit IgA ( $\alpha$ -chain specific)

Developed in Goat  
Delipidized, Whole Antiserum

Product No. **R 9380**

Anti-Rabbit IgA ( $\alpha$ -chain specific) is developed in goat using IgA from pooled normal rabbit colostrum as the immunogen. The antisera has been treated to remove lipoproteins and is supplied as a liquid with 0.1% sodium azide (see MSDS)\* as a preservative.

### Specificity

Antiserum shows precipitation arcs versus rabbit colostrums by immunoelectrophoresis. The antiserum is also reactive with rabbit IgA and normal rabbit serum.

### Precipitin Analysis

Each milliliter of antiserum contains 2.4-3.6 mg of specific antibody. Rabbit colostrum (whey) is used to determine the antibody concentration by a quantitative

### Storage

For continuous use, store at 2-8 °C for a maximum of one month. For extended storage, solution may be frozen in working aliquots. Repeated freezing and thawing is **not** recommended. Storage in "frost-free" freezers is **not** recommended. If slight turbidity occurs upon prolonged storage, clarify by centrifugation before use.

Due to the sodium azide content a material safety data sheet (MSDS) for this product has been sent to the attention of the safety officer of your institution. Consult the MSDS for information regarding hazards and safe handling practices.
