

# Viresolve® NFR Filters

## Fast, Reliable Retrovirus Removal

Viresolve® NFR filters are designed for downstream purification and efficiently remove retroviruses, and other large virus contaminants from bioprocessing feed streams. The asymmetric polyethersulfone (PES) membrane is characterized by high flow rates and high protein recovery. Viresolve® NFR filters effectively trap large viruses and provide excellent clearance of large viral contaminants. These filters are available as OptiScale®-25 capsules for filter sizing studies, and both capsule and cartridge formats for pilot and large-scale manufacturing needs.

Viresolve® NFR filters protect downstream processes and improve product safety.

### **Fast, Reliable Clearance**

- ≥6 log removal of retroviruses
- >98% protein recovery
- Robust processing
- Fast alcohol-free integrity testing
- Each lot is 100% integrity tested

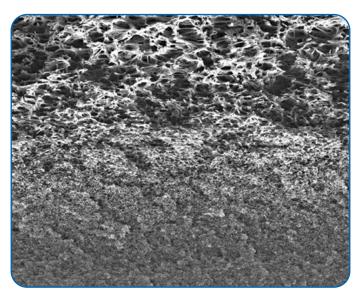

#### **Filter Formats**

- OptiScale®-25 devices
- Opticap® XL and XLT capsule filters
- Cartridge filters

### **Quality Management System**

All Viresolve® NFR filters are designed, developed, and manufactured in accordance with a Quality Management System approved by an accredited registering body to ISO 9001 standards. Viresolve® NFR capsules and cartridge filters are integrity tested during manufacturing and are supported by a Validation Guide.

Viresolve® NFR filter's asymmetric membrane provides fast flow and unmatched retention of large virus.

### **Fast Integrity Testing**

A convenient, easy to perform, air-water diffusion integrity test confirms the virus retention properties of the membrane.

#### **Virus Retention**

Viresolve® NFR cartridge and capsule filters have been extensively tested using a surrogate for retrovirus, bacteriophage Phi 6 ( $\phi$ 6), 78 nm diameter. Challenge studies demonstrate consistent retention over a broad range of feed and processing conditions, Table 2.

Figure 1 highlights retention of large viruses with Viresolve® NFR filters.

Condition	Range
pH	4.5-8.5
Ionic Strength	25-250 mM
Process time	up to 4 hrs
Pressure	0.3-4.1 bar (5-60 psi)
Protein concentration	0-25 g/L

**Table 2.** Feedstock and Processing Conditions for >6.5 LRV Virus Retention Using Viresolve® NFR Filters

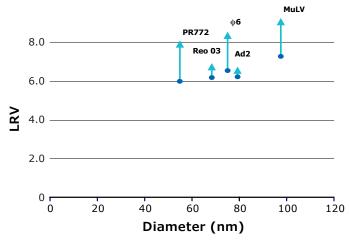

Figure 1. Representative Virus Retention Data for Viresolve® NFR Filters

### **Specifications**

Autoclaving       Not autoclavable. Sold gamma irradiated       After wetting, may be autoclaved for 3 cycles of up to 60 min at 125 °C, liquid cycle, slow exhaust. May be steamed-in-place for 30 minutes at 12 minutes		OptiScale®-25	10-inch Cartridge	20-inch Cartridge	30-inch Cartridge
