

Product Code C 5467 — Cell growth and IgG production in a proprietary CHO cell line were compared under suspension culture conditions in C 5467 medium or a leading competitor's protein-free medium. CHO cells were seeded at 50,000 cells/ml in spinner flasks. Samples were taken daily to analyze cell growth and protein production. The data indicates that C 5467 supported higher average viable cell numbers and higher protein productivity than the leading competitor's product.
