

## Product Information

### HUMAN IgG2, LAMBDA Purified Myeloma Protein

Product Number I 5279

#### Product Description

Human myeloma IgG2, lambda is purified from human plasma by fractionation, ion-exchange and affinity chromatography procedures.<sup>1-3</sup> The purified immunoglobulin represents a single subclass and light chain type.

The purified IgG2, lambda may be used as an immunoglobulin calibrator, reference antigen, blocking agent or coating protein in a variety of immunoassays including ELISA, dot-blot immunobinding, Western immunoblotting, immunodiffusion, immunoelectrophoresis, hemagglutination, and cell-binding assays.<sup>4-6</sup>

#### Reagent

Human myeloma IgG2, lambda is supplied as a frozen liquid in 20 mM tris buffered saline, pH 8.0. No preservatives are added. Each vial contains at least 1 mg of immunoglobulin.

Protein concentration is measured using  $E^{0.1\%} = 1.4$  at 280 nm.<sup>7</sup>

Purity of immunoglobulin is greater than 95% as determined by reduced SDS-PAGE. Identity of IgG2, lambda is verified by subclass monoclonal antibodies and type specific polyclonal antibodies in immunoelectrophoresis and indirect ELISA assays.

#### Precautions and Disclaimer

BIOHAZARD: Handle as if capable of transmitting infectious agents. Refer to MSDS.

Source material tested and found negative for antibody to HIV and HbsAG.

#### Storage/Stability

Store in aliquots at  $-20^{\circ}\text{C}$ . Repeated freezing and thawing is not recommended. Storage in "frost-free" freezers is not recommended. If slight turbidity occurs upon prolonged storage, clarify the solution by centrifugation before use. Working dilution samples should be discarded if not used within 12 hours.
