

**MONOCLONAL ANTI-LEF-1 (HMG DNA BINDING DOMAIN), Clone REMB6,
Purified Mouse Immunoglobulin**

Product Number **L 7901**

Product Description

Monoclonal Anti-LEF-1 (HMG DNA Binding Domain) (mouse IgG1 isotype) is derived from the REMB6 hybridoma produced by the fusion of mouse myeloma cells and splenocytes from a mouse immunized with full length recombinant LEF-1. The antibody is purified from ascites fluid using Protein G chromatography.

Monoclonal Anti-LEF-1 (HMG DNA Binding Domain) recognizes an epitope in the highly conserved HMG DNA binding domain of human LEF-1 using immunoblotting (55-57 kDa).

Lymphoid enhancer factor, LEF-1, is a transcription factor of the High Mobility Group of DNA binding proteins. It is one member of a family of four proteins referred to as LEF/TCF transcription factors (LEF-1, TCF-1, TCF-3 and TCF-4). These factors play crucial roles in WNT/Wingless signaling, a signal transduction cascade that directs cell differentiation. Aberrant activation of the WNT/Wingless pathway is also a root cause in the genesis of certain cancers such as colon cancer, melanoma and breast cancer.

LEF-1 is expressed during development in many different differentiating tissues, and in a few tissues after birth. LEF-1 expression is required for proper development of breast, teeth, hair, whiskers and the trigeminal nerve. It is redundant with TCF-1 (for T-cell Factor-1) for correct development of T lymphocytes in the thymus. LEF-1 is a 399 amino acid protein. Alternative splice forms of LEF-1 and other LEF/TCF family members have been identified, but the expression pattern and relative abundance of these alternative forms have not been well studied. They can appear on westerns as small immunoreactive forms.

Product Information

Reagent

Monoclonal Anti-LEF-1 (HMG DNA Binding Domain) is supplied as a solution in 0.01 M phosphate buffered saline, pH 7.5, containing 0.08% sodium azide.

Protein concentration is approximately 1 mg/ml.

Precautions and Disclaimer

Due to the sodium azide content a material safety sheet (MSDS) for this product has been sent to the attention of the safety officer of your institution. Consult the MSDS for information regarding hazardous and safe handling practices.

Storage/Stability

For continuous use, store at 2-8 °C for up to one month. For extended storage, freeze in working aliquots. Repeated freezing and thawing is not recommended. Storage in "frost-free" freezers is not recommended. If slight turbidity occurs upon prolonged storage, clarify the solution by centrifugation before use. Working dilution samples should be discarded if not used within 12 hours.

Product Profile

A working concentration of 1 µg to 5 µg is recommended for immunoblotting using whole extracts of human Jurkat cells or transiently expressed human Cos-1 cells.

Note: In order to obtain best results in different techniques and preparations we recommend determining optimal working concentration by titration test.
