Product Information

Anti-Human IgD (δ - chain specific)

Developed in Goat
Delipidized Whole Antiserum

Product Number **I 1386**

Product Description

Anti-Human IgD (δ -chain specific) is developed in goat using purified human IgD as the immunogen. The antiserum has been treated to remove lipoproteins.

Specificity for the δ -chain of human IgD is determined by Ouchterlony Double Diffusion (ODD). The antibody preparation is specific for human IgD when tested against purified human IgA, IgD, IgG, IgM, Bence Jones Kappa and Bence Jones Lambda myeloma proteins. Using immunoelectrophoresis, a dilution of Goat Anti-Human IgD shows strong reactivity with human IgD at 1 mg/ml.

Reagents

Goat Anti-Human IgD is supplied as a liquid containing 0.1% sodium azide as a preservative.

Precautions and Disclaimer

Due to the sodium azide content a material safety data sheet (MSDS) for this product has been sent to the attention of the safety officer of your institution. Consult the MSDS for information regarding hazards and safe handling practices.

Storage/Stability

Store at 2-8 °C.

For extended storage, the solution may be frozen in working aliquots. Repeated freezing and thawing is not recommended. Storage in "frost-free" freezers is not recommended. If slight turbidity occurs upon prolonged storage, clarify the solution by centrifugation before use.

This goat antiserum was maintained at pH 5.0 for 40 minutes to meet U.S.D.A. requirements.

Product Profile

Identity and purity of the antibody is established by immunoelectrophoresis (IEP). Electrophoresis of the antibody preparation followed by diffusion against anti-goat IgG and anti-goat whole serum results in a single arc of precipitation against the anti-goat IgG and multiple precipitation arcs against the anti-goat whole serum.
