

# PURITY RE-DEFINED

## Xylene (Isomeric mixture) for Histology

Xylene is the gold standard and most common aromatic solvent which has been used for decades in routine histoprocessing, deparaffinization and clarification applications. A mixture of the ortho-, meta- and para- isomers provides for a higher degree of hydrophobicity prior to mounting and coverslipping.

### Benefits

- Rapid deparaffinization and clearing
- High capacity, histological grade ensures high quality results
- Isomeric mixture with specifications for use in histology and cytology
- CE-certified, IVD product

### To place an order or receive technical assistance
